If you have been involved in photography and have used the FREE Adobe Photoshop Elements 9, 7, or 5, you will be initially noticing this application a lot like Photoshop CC does. It has the same looks. But if you want to create a wealth of new and exciting printing and Web/Online projects as well as Photoshop style graphics and healthy color on Web, mobile, etc. The appearance of the latest update is a marked improvement, particularly the font rendering. I like the "smart" resolving of complex and deep outlines, as well as the accurate shape fills. It also improved transparency, particularly when they are outside of the lines of the original image. Colors are incredibly bright, particularly in the grass, and there is little to no banding. Even photographs and translated documents are better rendered than the default. There are better-looking gradients and shadows. On the other hand, there's no masking, no Miniature effects, no text options, and no limits on brush sizes, all of which made me very happy with CS5. One thing Adobe has done really well, though, is enable other Photoshop users to import and export to Sketch. Once this is done, you can start drawing, holding down the Option-E key to toggle auto-select, then drawing with the Apple Pencil. That lets you start using the iPad Pro as a drawing editor and video-screen, allowing you to look at image adjustments with another app, or review them on the iPad Pro. Sketch also has a Live area, so the image you're working on will mirror itself; that way, no matter which app you're using (or which computer), you'll always see the same image.
